

## ACS Fleet Toll Management

You told us that you were concerned about internal toll management procedures, and we listened.

ACS Fleet's toll management is simple, straightforward and integrated into your regular fleet management solution. It is designed to minimise the time you spend managing your fleet's tolls, so you can get on with managing your own business.

Using CityLink tags, you don't have to worry about where your fleet travels. The tags work on all tollways across Australia, and can be easily transferred between your vehicles, as your fleet changes and grow.

We will actively manage your toll charges, and provide straightforward monthly reports which capture important data such as date, time, location, and breakdown of costs for each vehicle for simple monthly expense allocation.

Using ACS Fleet's toll management solution, you will benefit from:

- Saving valuable time through supplier consolidation (one-stop-shop)
- Financial rewards gained from efficient reporting procedures
- Cost savings due to reduced administration
- Increased control through a simplified system that works to highlight exceptions rather than the rule
- Increased fleet efficiencies using data to analyse trends and review driver habits and distribution routes
- Reduction in driver frustration
- Efficient coordination of collection and re-issue of tags when vehicles are replaced

Let ACS Fleet manage your internal toll procedures, provide real cost savings and simplify the process, for only \$10 a month.

**Total solutions.**
